

Mobile World Congress 2011

First Media provides proven, end to end **Multi-Screen Quality of Experience (QoE)** monitoring and management for digital video delivery to Mobile clients. Our award winning client software supports a wide range of mobile devices including Apple iPhone, iPad, Blackberry, Google Android and laptops. Service providers will be able to gain a real time “remote eye” view of the quality of video that is being delivered to the end users.

- Small foot print
- Monitors TCP/HTTP based video
- Monitors Multicast and Unicast VOD
- Provides device specific performances
- Wide variety of support for mobile OS such as Android, Apple, Win Mobile, Symbian/Maemo etc.

We will have a few members of our executive management staff and technical team attending the MWC 2011 Feb 14- 17 and would like to arrange to meet representatives from the Mobile TV service providers, systems integrators and vendors attending the conference to discuss common synergies and partnership development opportunities.
